Overview

Thank you for engaging with us.

In the past years we have worked to build hundreds of solutions with a range of services including blockchain implementation, product strategy, software development, design and testing.

Whatever your development needs, we are confident our team of over 200 developers can add significant value to your team. We are pleased to present you with this proposal and we look forward to a future together.

Regards,

**Elliott Rayne & Cryptodevelopers.io**

Solutions

Coin Development

Embrace digital transactions by harnessing CDEVS strategic coin development services to foster your business growth. Our global team of experts works with each client to help build intelligent strategies around effective use cases and implementation. We have real-world experience delivering comprehensive offerings – from ideation and coin development to launch and marketing – to our clients across a host of industries.

Learn More

Smart Contract Development

Automate your processes, transactions and agreements while improving security and reducing costs with a smart contract. Our comprehensive services span smart contract design, development, auditing and optimisation. Industry-leading platforms such as Ethereum, Hyperledger and EOS are leveraged to drive the smart contract development process.

Our Services
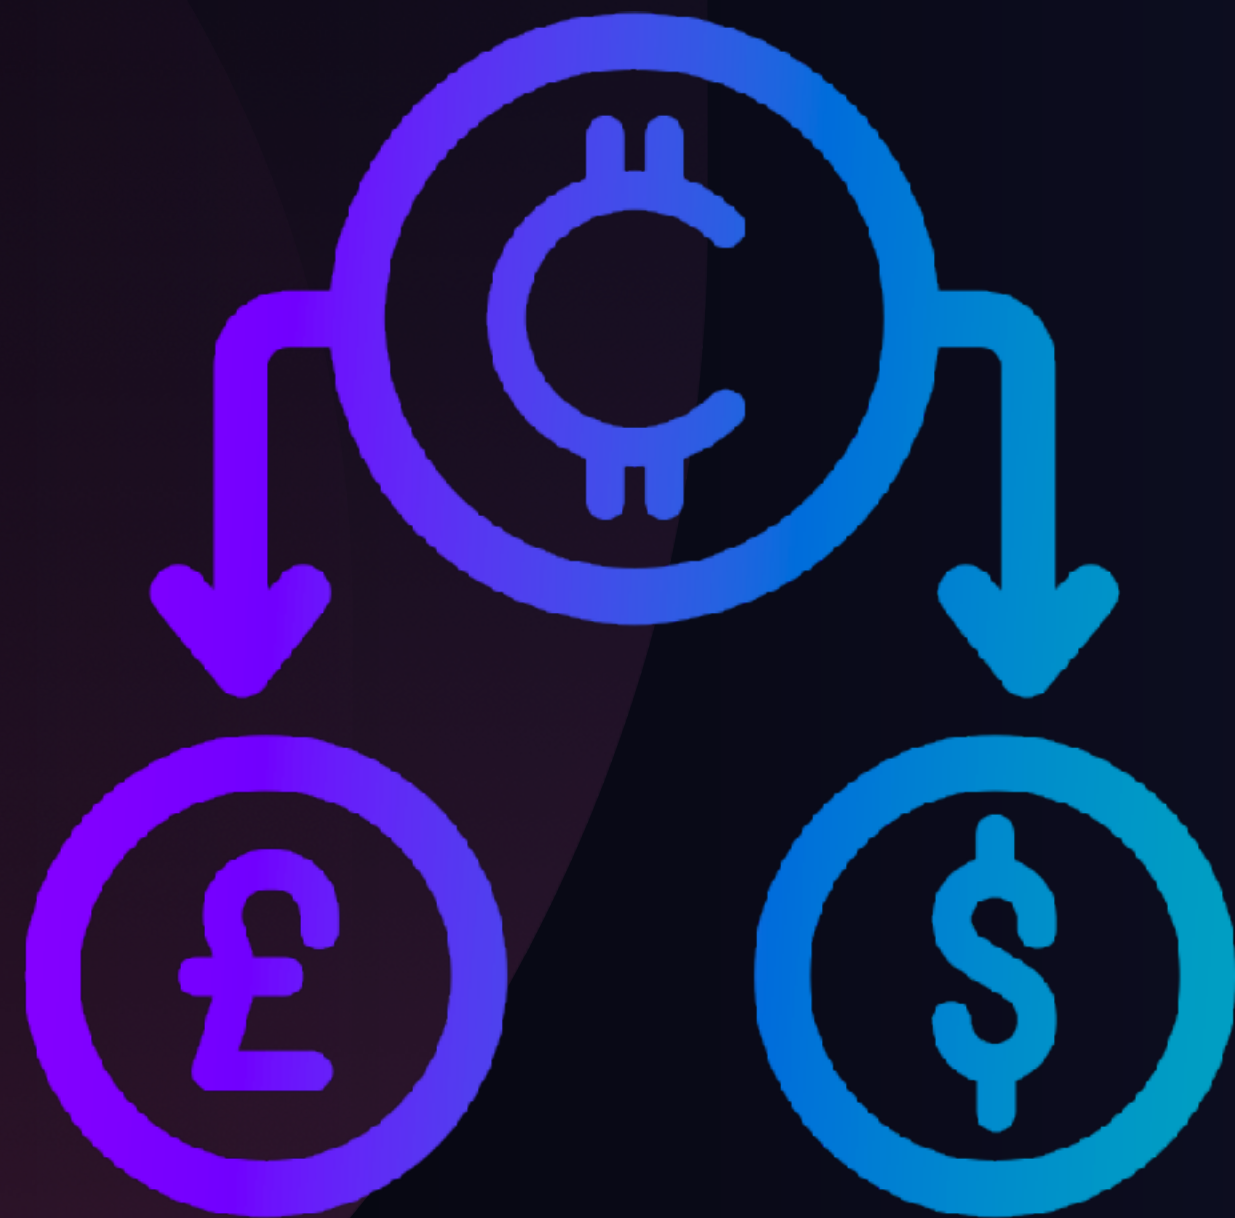

Exchange Development

Provide your users with a smart trading platform with our scalable and customised white label exchange underpinned by powerful trading engine, multi-layer security, high TPS (transactions per second) and liquidity, and self-explanatory admin panel and client dashboard. Our strategically designed services cater the need for centralised, decentralised and P2P exchange development.

Learn More
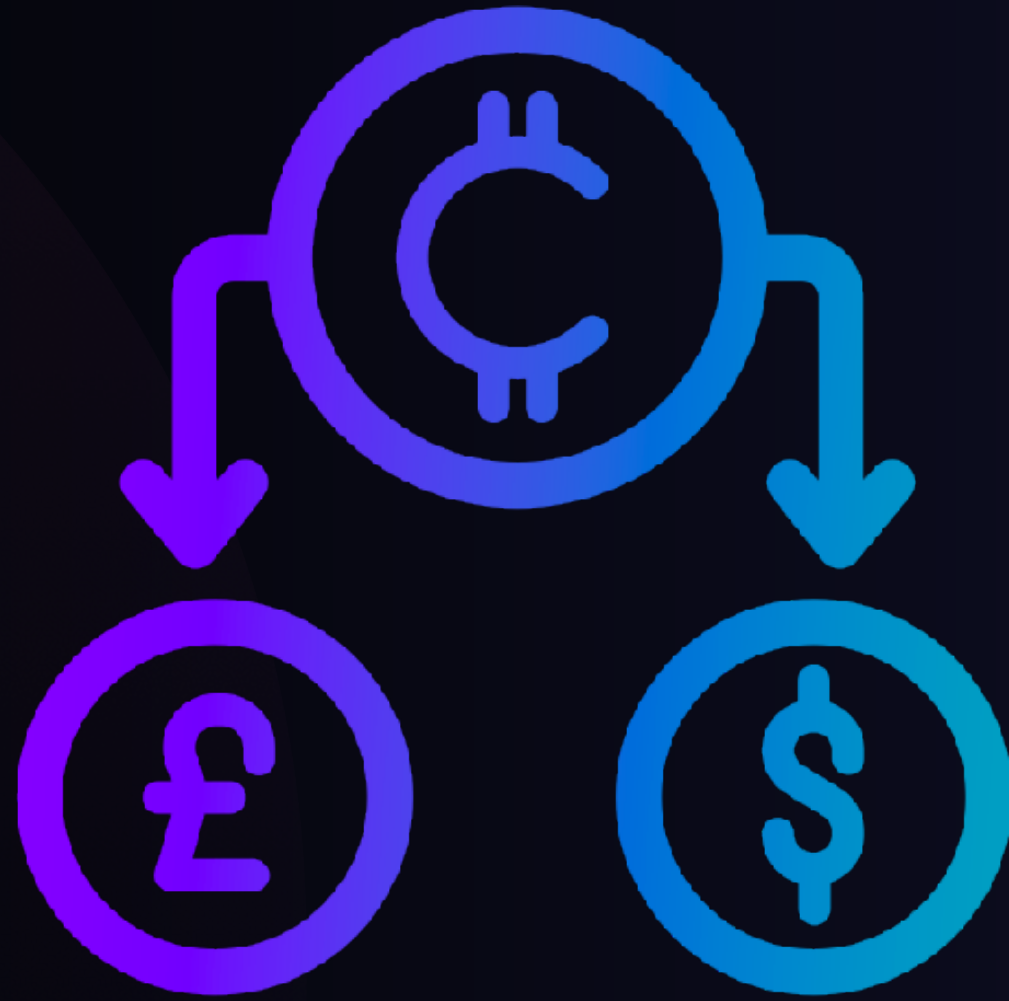

Binance-like Exchange Development

Binance, one of the top three exchanges worldwide, has witnessed an incredible growth since its launch in 2017; it made a profit of $446 million in 2018. At CDEVS, we build a crypto exchange platform like Binance to allow you to benefit from the most acclaimed features of the exchange, like user-friendly UI, high TPS, faster trading, more liquidity, support for major crypto markets like BTC, ETH, LTC, and more, and multi-language support.

Learn More   –
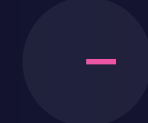

Margin Trading

An exchange integrated with margin trading allows traders to borrow a specific amount of funds to increase the size of their orders, which maximises the gain from profitable trades. Reinforce your exchange with margin trading to empower your users to amplify their gain from market swings. With the power of our advanced trading engine, your uses can go long or short on various cryptocurrencies by up to 100 times.

Digital Marketing

Protect your reputation, build your audience, drive growth. Crypto Developers is a full-service digital content services provider for clients in the UK and around the world. We help brands perform effective research that drives development of content type choices, budget allocation, content themes and topics, content promotion, and even publication and promotion. Our experts have helped clients around the world build a digital presence through content strategy, design, and publication for blogs, news stories, multimedia, infographics, and technical guides.

Learn More   –
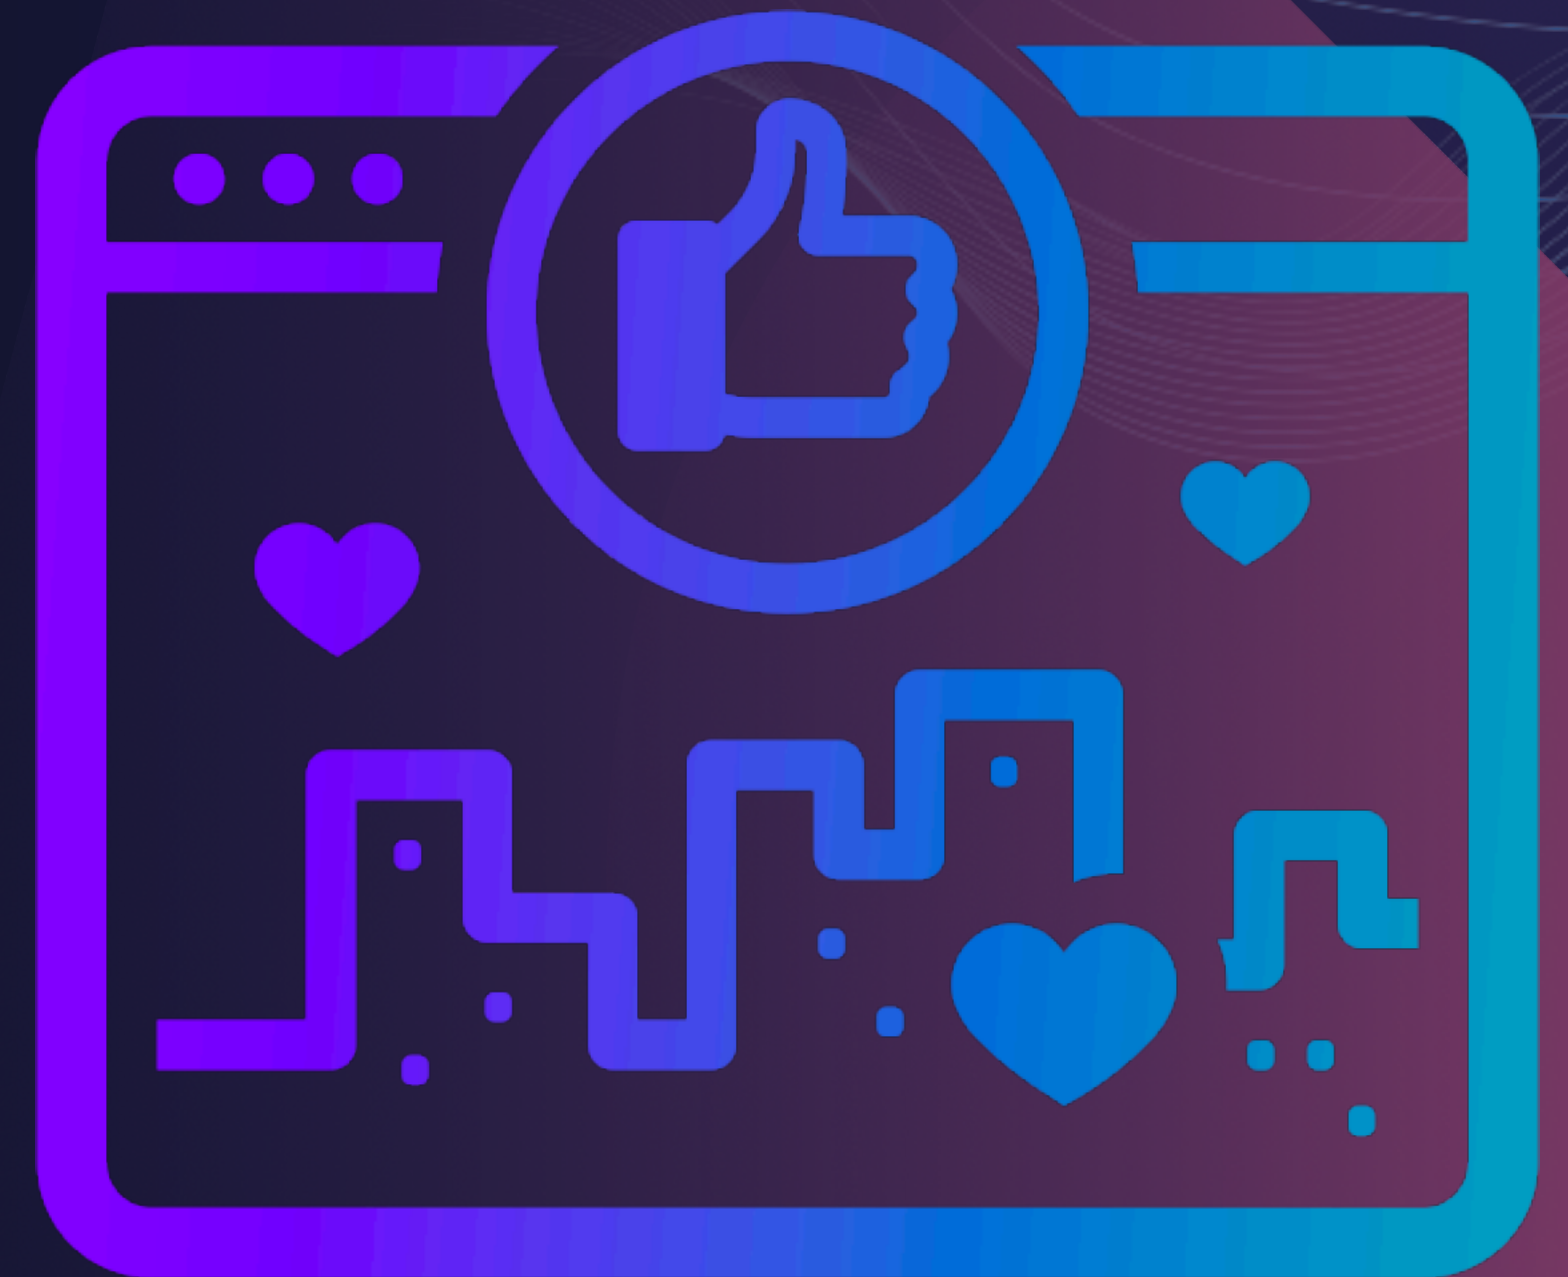

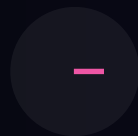

Software and app development

Regardless to what business you run, we offer customised development solutions that caters specifically to your business needs. The variety of customisation is well explored by our highly skilled app development experts. Get a complete, end-to-end app package for your business, including integration with existing back-end systems, and even the support and maintenance from our expert app developers.

Learn More

PPC Campaigns

PPC Advertising on websites and social media allows businesses to put their products & services in front of people who are actively searching for them. With the right PPC Campaign strategy you'll be able to display your ads to prospects when they're ready to convert or buy. But it's also easy to get your fingers burned, and blow your budget very quickly, with little or no return. Our PPC service is results-driven, so measuring ROI is always our focus.

Learn More

Creative graphic design
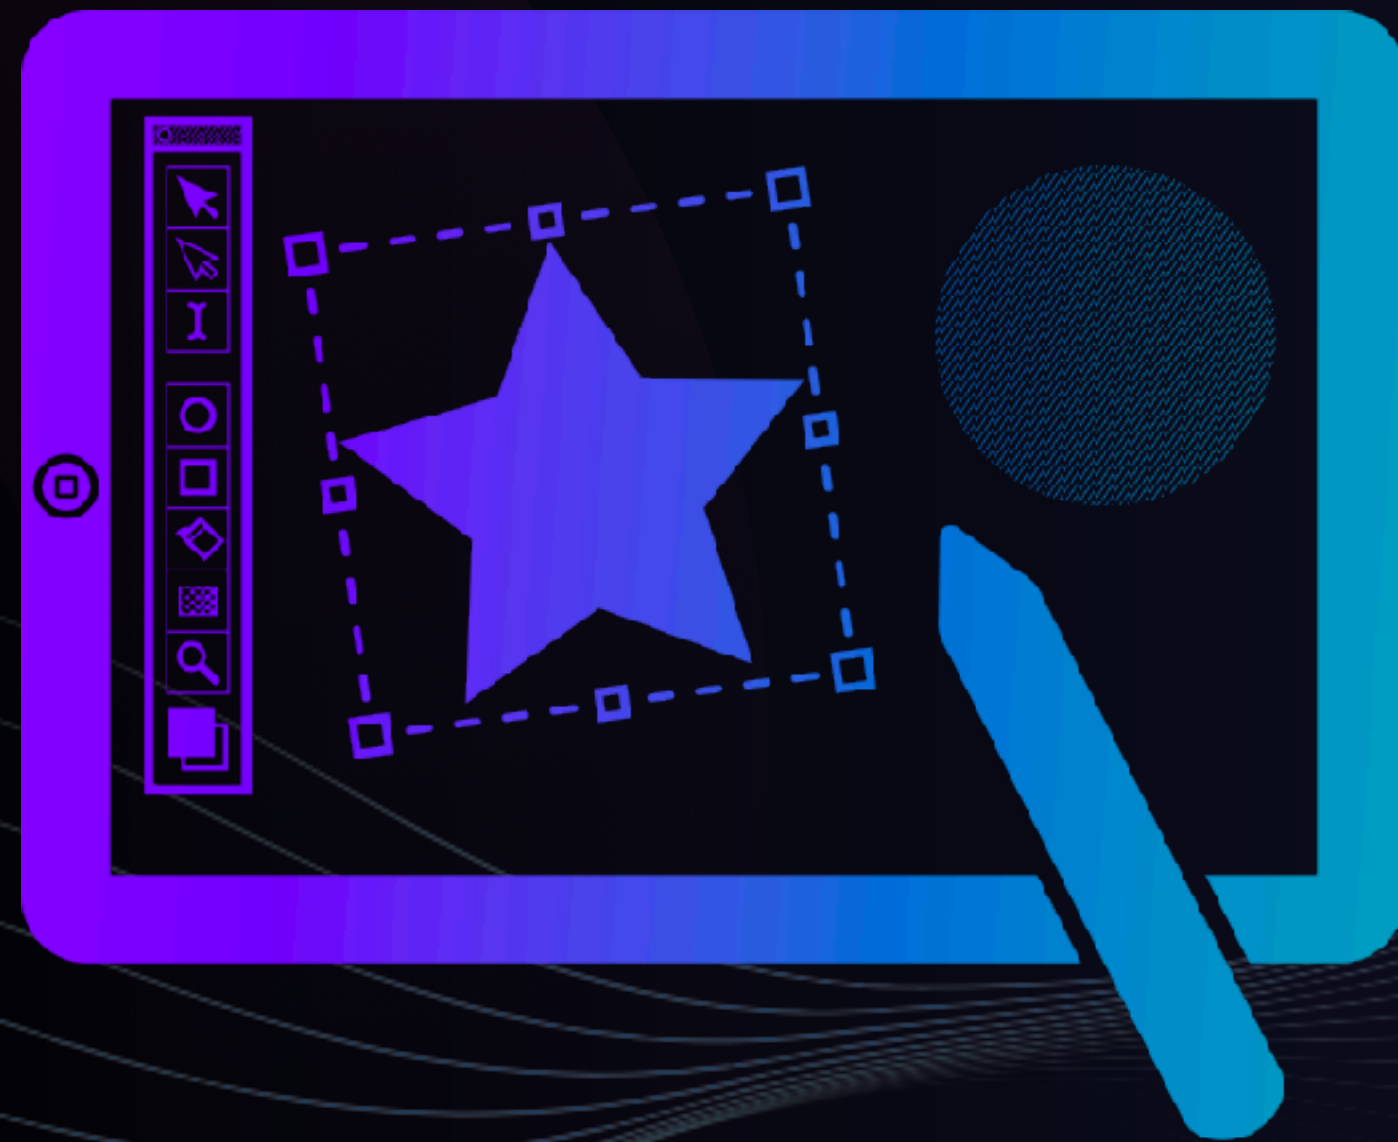

It is important that your logo portrays your business in the correct way, leaving a lasting impression and engaging your audience. The logo is only the start of developing a quality brand identity. As a graphic design agency, our team of creative experts will also design all supporting graphics that are required such as stationery, brochures and websites.

Case Studies

# We support start up founders and the Fortune 500

Our dev team have worked with the likes of:

- DHL
- Samsung
- Intel
- Facebook
- Appsumo

and so many more

Manage SLP Crypto Coin

Axie infinity gives SLP Coin when the game is played. A system was created to directly manage the SLP coin directly from Axie Infinity to our system.

How it works is there is a stakeholder termed as "master". The master provides the Axie account and the account is shared with people who want to play the game and profit is split 50/50. Account owners can check history of who has brought in the amounts of SLP Coin. The profit sharing is also integrated as a WhatsApp notification.

The system is built on a bespoke CMS where reports can be downloaded. Here any coins can be managed with games that give NFT's.

Creation of a crypto coin
l Lyfe Crypto Coin

The First Rewards & Gamification Platform for Healthy Lifestyle in Indonesia.

We helped with the programming and creation of Lyfe Coin. Lyfe is building a healthy ecosystem where challenges are meant to encourage our users to have a healthier lifestyle. We value our users' hard work for living a healthy life with rewards, but overall, we want everyone to start investing and living a healthy lifestyle.
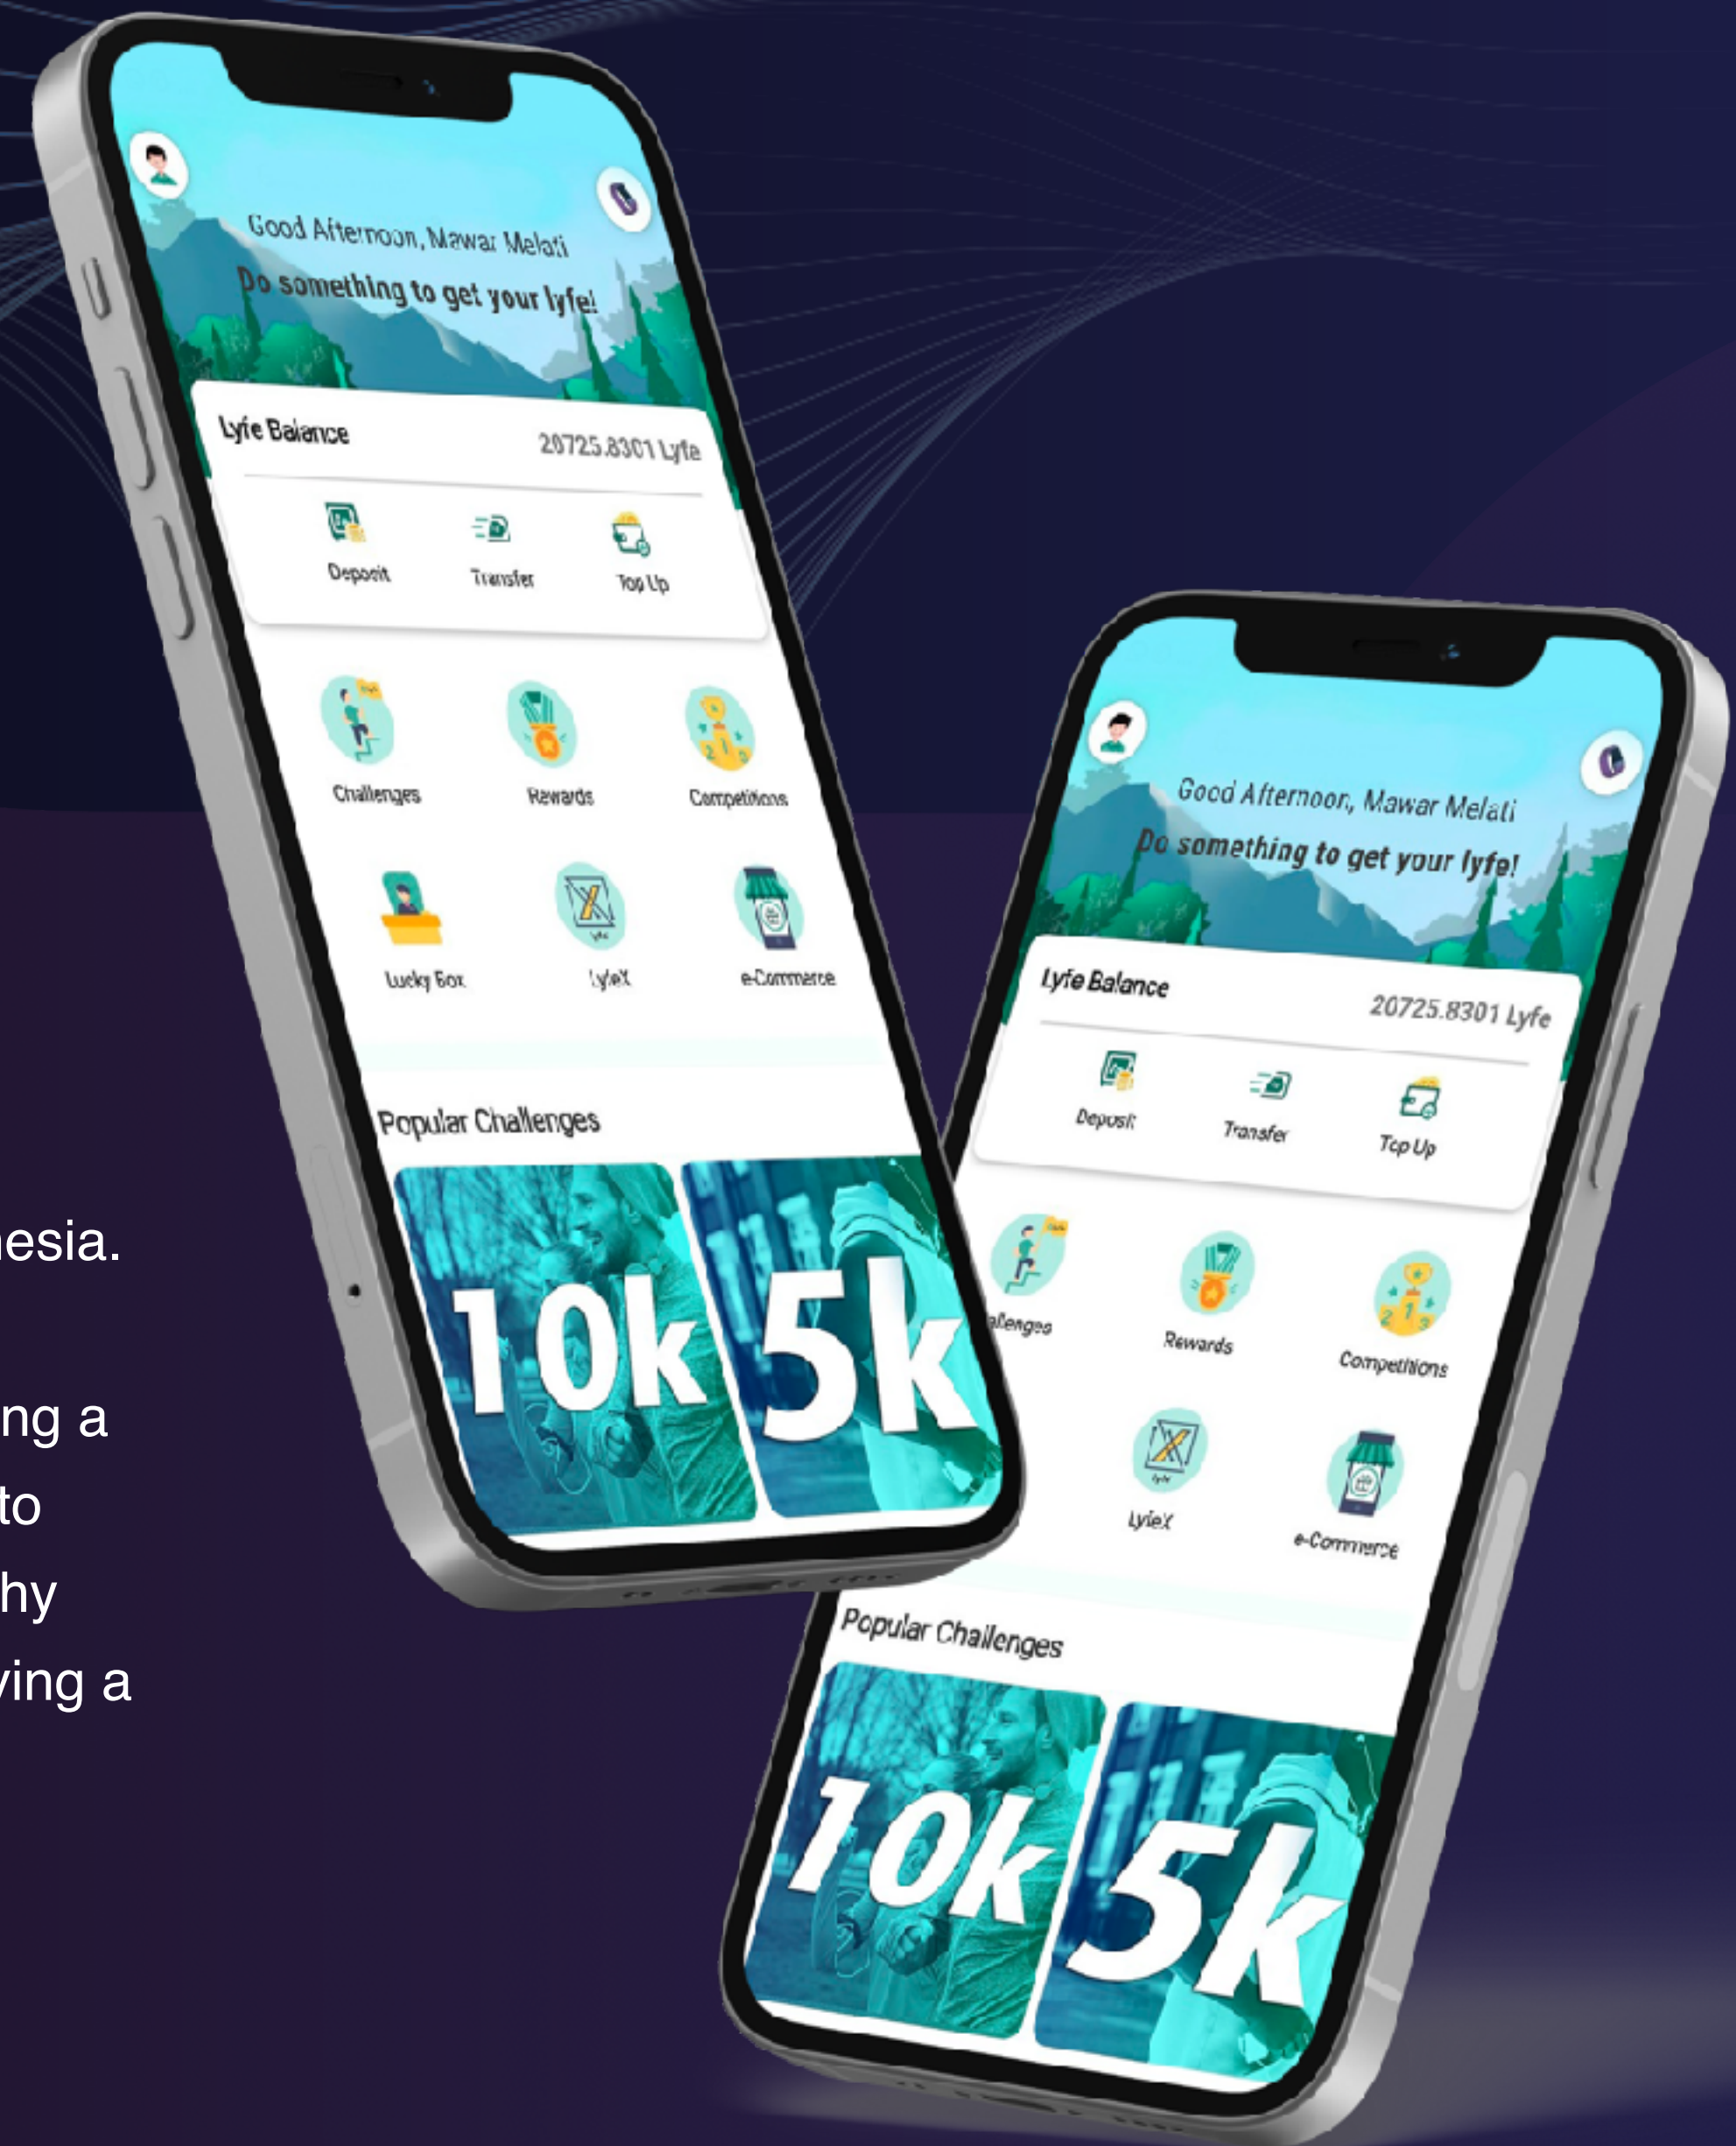

Web Based Monitoring

CDEVS was in charge of setting up a system in order to manage agency data for Giat.

Our objective was to help Giat organise and manage employee data such as employee lists, departments and app accounts easily. Then we further improved the software to manage employee attendance as well as permit applications can so they can be monitored and managed in a controlled manner.
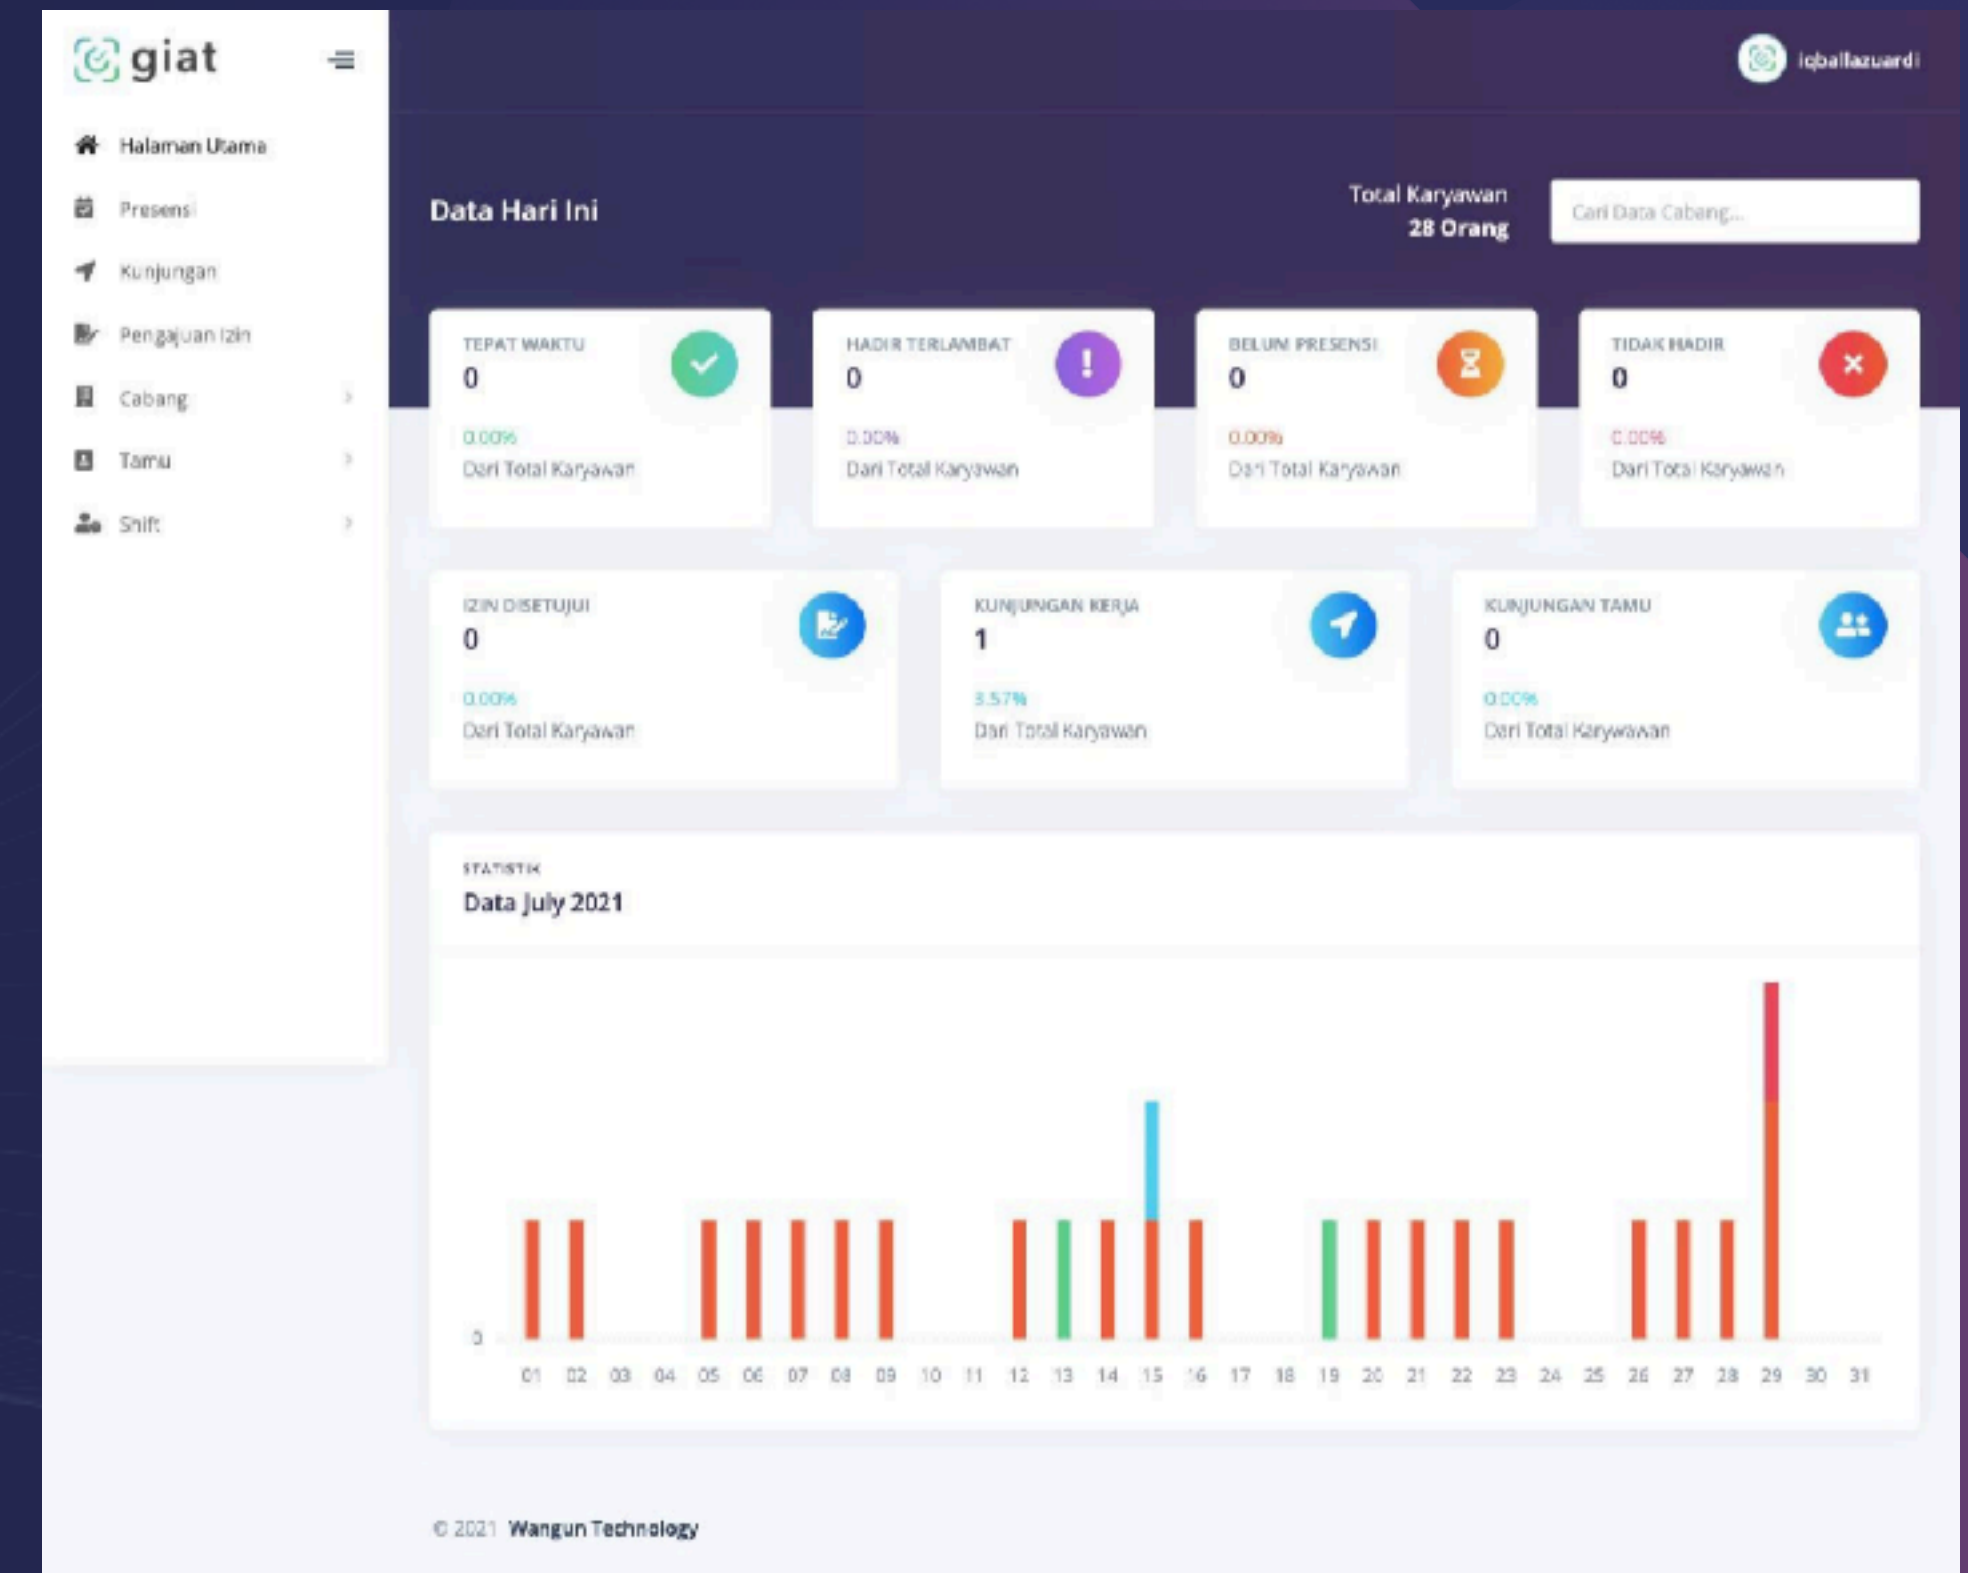

Attendance Machine with Face Recognition

CDEVS were put in charge of developing a software for ZKTeco that could easily use the power of face recognition in order to perform certain actions such as open locked doors etc. Face recognition technology makes attendance easy and safe. All software we developed for ZKTeco are integrated and synchronised with a monitoring software as requested by our client.

Delivery Monitoring System
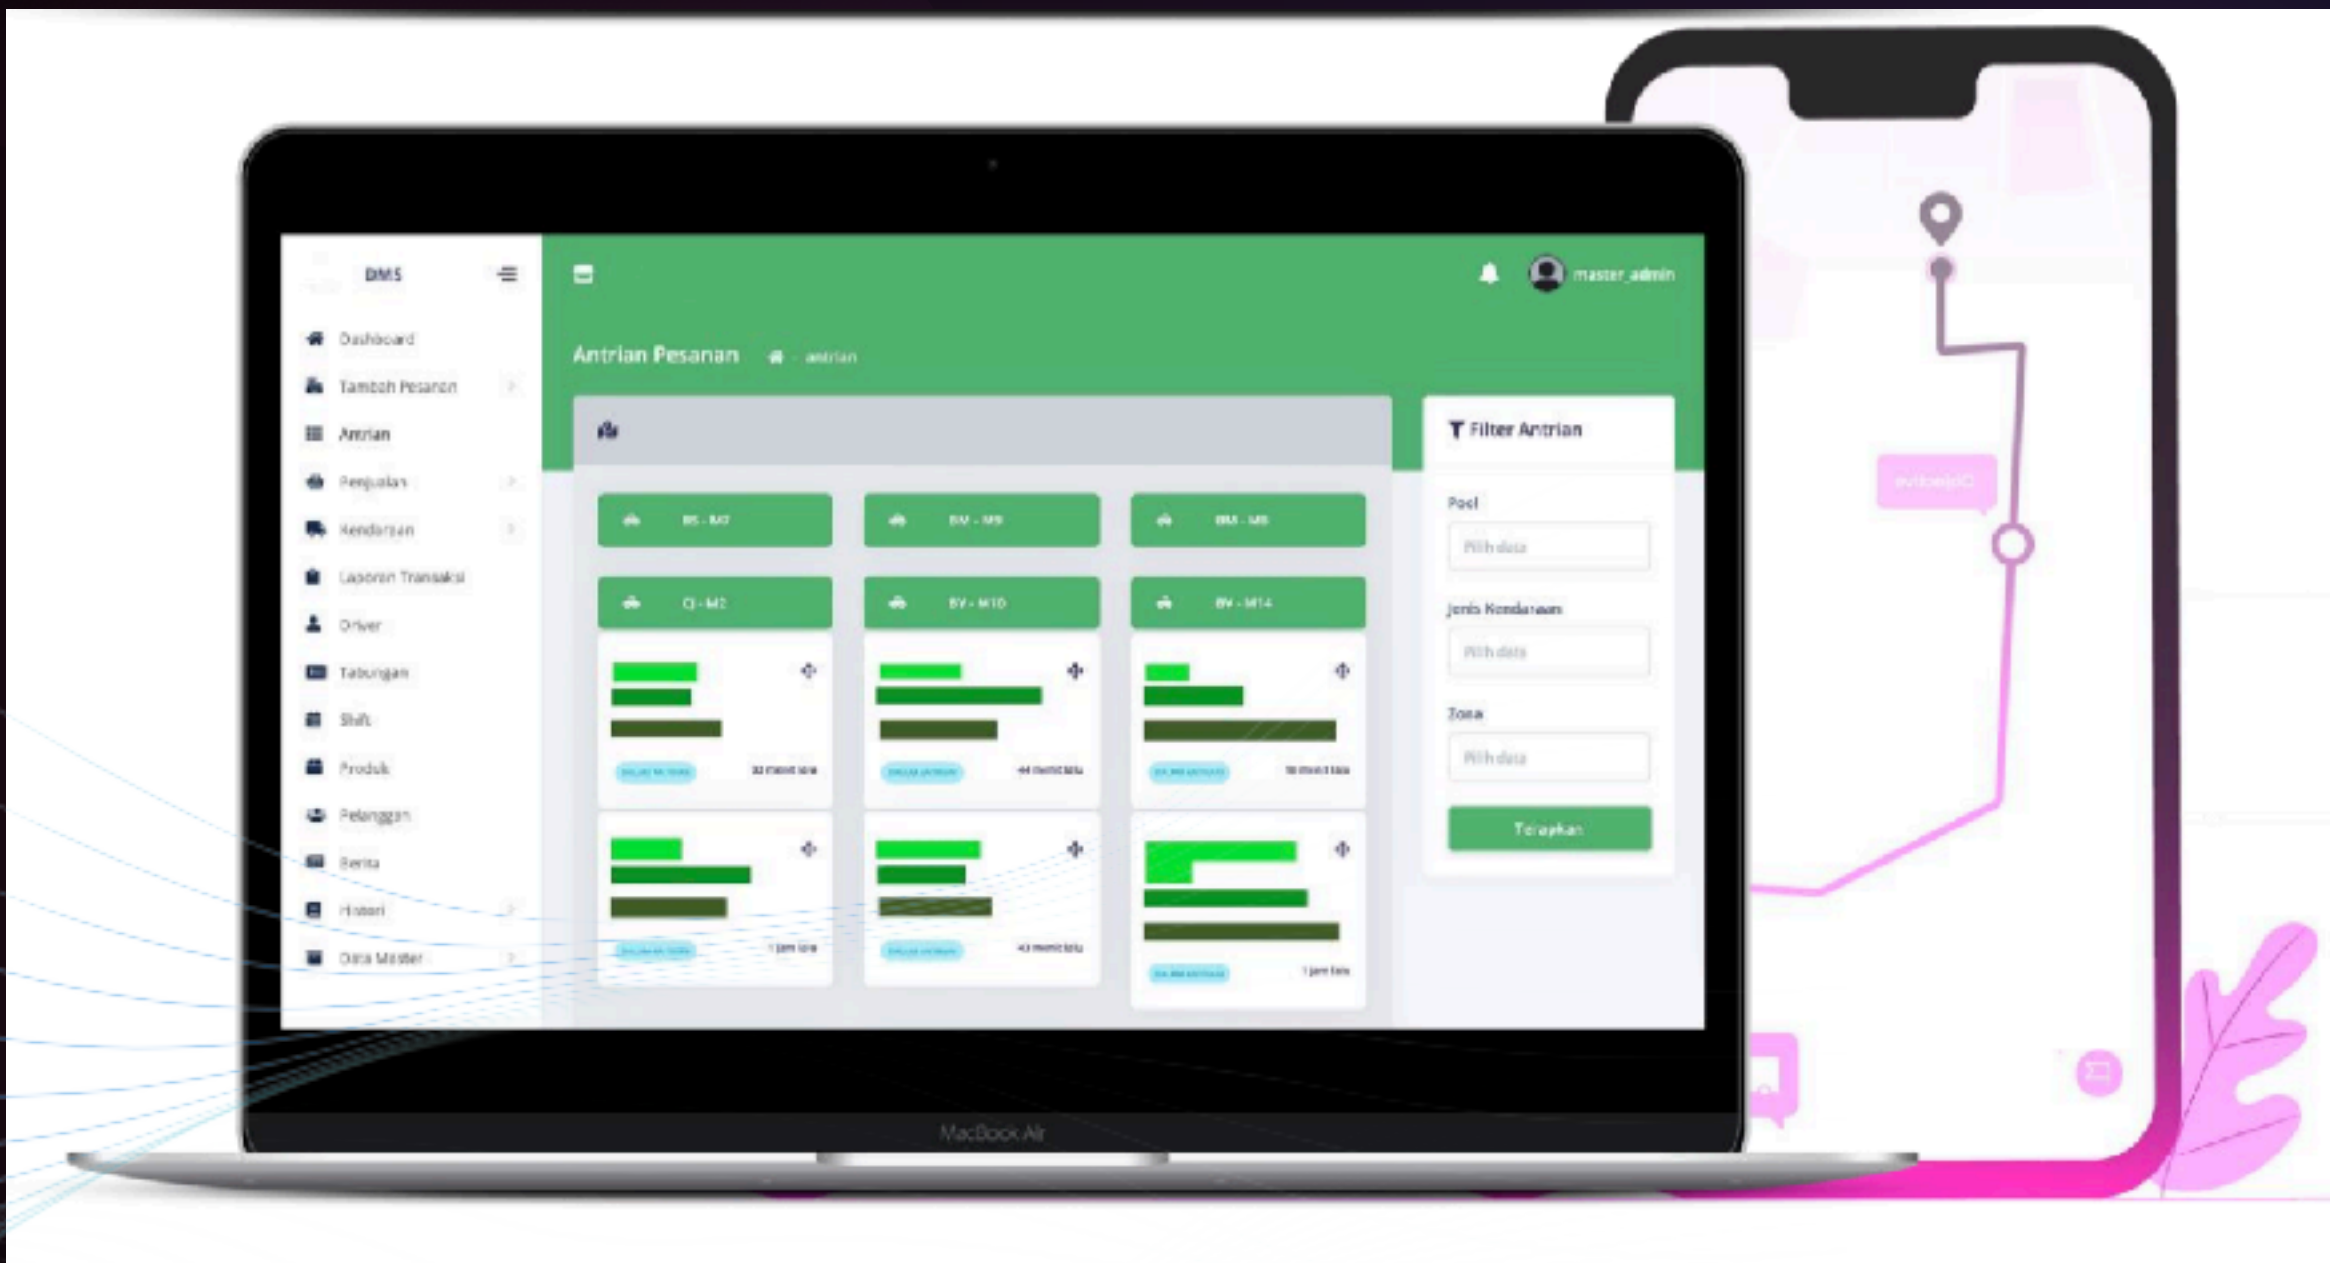

We developed what is now a very popular and useful software for our day to day modern city life - delivery monitoring system. The software that tracks your Uber arrival time or your food delivery we had created our very own software that does this exact action and it's worked very well ever since.

From the clients side also there's extra monitoring and tracking we had built such as, when, where, how frequent and for how much orders were placed so they can use this data for their marketing and overall business improvement.

30

CitizenNet

CitizenNet is the world's first predictive Desktop Marketing tool: a dynamic, self-serve platform that enables brand marketers to better understand their core customers, uncover new (and sometimes surprising) potential customers, and optimize their campaigns to engage these audiences.

All before spending a single advertising dollar.

**Prediction Technology for Social Media Advertising**

Web Development

We built a website for buying and selling cars for Metro Vehicle Sales, the unique function in this website is that consumers can sell their used cars and get offers directly from the site itself rather than having to reach out and wait for a quote.

This website can also check the data of all vehicles registered legally in the UK government. Details of the vehicle from the vehicle number to the purchase details are attached on the website.
